- My 3 takeaway messages

What next?

The foundation - constructing a mental model of a text

Molly was carrying the tumbler of juice. She tripped on the step. Her eyes filled with tears. *"Don't worry"* said her brother, and he went to fetch the mop.

Constructing a mental model: word reading

Molly was carrying the tumbler of **juice**. She tripped on the step. Her eyes filled with tears. *“Don’t worry”* said her brother, and he went to fetch the mop.

often early acquired but challenging: ‘ui’ a single vowel, i regarded as silent, long vowel –juice vs guide

Constructing a mental model: vocabulary

Molly was carrying the **tumbler** of juice. She tripped on the step. Her eyes filled with tears. *“Don’t worry”* said her brother, and he went to fetch the mop.

tumbler = container
for liquid

Constructing a mental model: grammar

Molly was carrying the tumbler of juice. She tripped on the step. Her eyes filled with tears. "Don't worry" said her brother, and he went to fetch the mop.

Constructing a mental model: grammar

Molly was carrying the tumbler of juice. **She** tripped on the step. **Her** eyes filled with tears. *“Don’t worry”* said her brother, and he went to fetch the mop.

Constructing a mental model: higher-level language skills (inference, comprehension monitoring, knowledge and use of text structure) and background knowledge

Molly was carrying the tumbler of juice. She tripped on the step. Her eyes filled with tears. *“Don’t worry”* said her brother, and he **went to fetch the mop.**

Constructing a mental model: The product of successful reading comprehension

The product of successful reading comprehension is an accurate, coherent and integrated memory-based representation of the situation or the state of affairs described in the text – a Mental Model or a Situation Model.

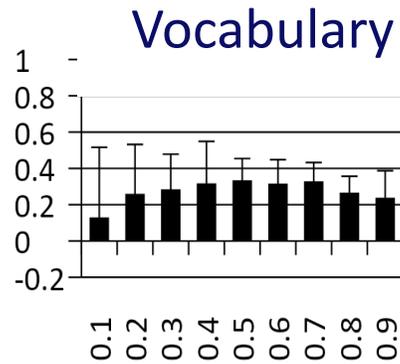

(Johnson-Laird, 1983; Kintsch, 1998)

Key finding 1: multiple skills and knowledge bases each play a role in successful reading comprehension

Grade 3 children:

Do language skills – vocabulary, grammar, higher-level language skills (inference, comprehension monitoring, knowledge and use of text structure) and word reading predict unique variance in reading comprehension for all readers?

Key finding 1: multiple skills and knowledge bases each play a role in successful reading comprehension

Grade 3 children:

Do language skills – vocabulary, grammar, higher-level language skills (inference, comprehension monitoring, knowledge and use of text structure) and word reading predict unique variance in reading comprehension for all readers?

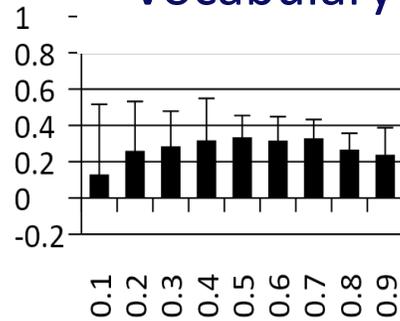

prediction strength

reading comprehension ability: low to high

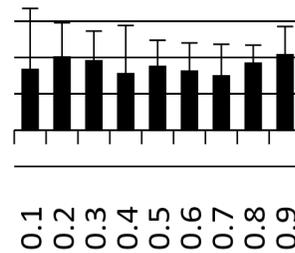

Key finding 1: multiple skills and knowledge bases each play a role in successful reading comprehension

prediction strength

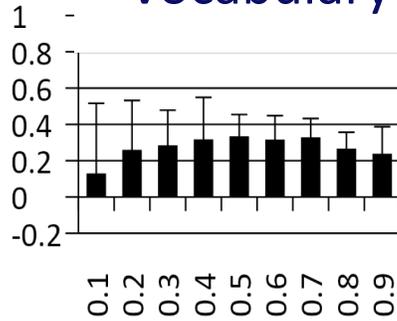

reading comprehension ability: low to high

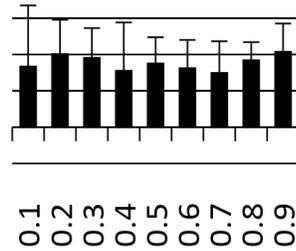

Key finding 1: multiple skills and knowledge bases each play a role in successful reading comprehension

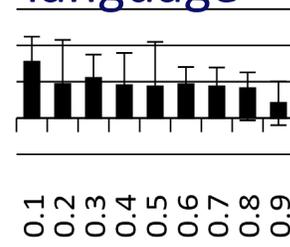

Vocabulary

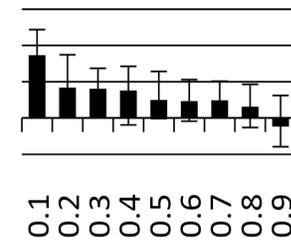

Grammar

Higher-level language

Word Reading

prediction strength ↑

Vocabulary, grammar, and higher-level language skills each predict unique variance in reading comprehension across the range of reading comprehension ability.

Key finding 2: these skills and knowledge bases predict reading comprehension outcomes over time

Key finding 2: these skills and knowledge bases predict reading comprehension outcomes over time

abcdefghijklmnopqrstuvwxyz

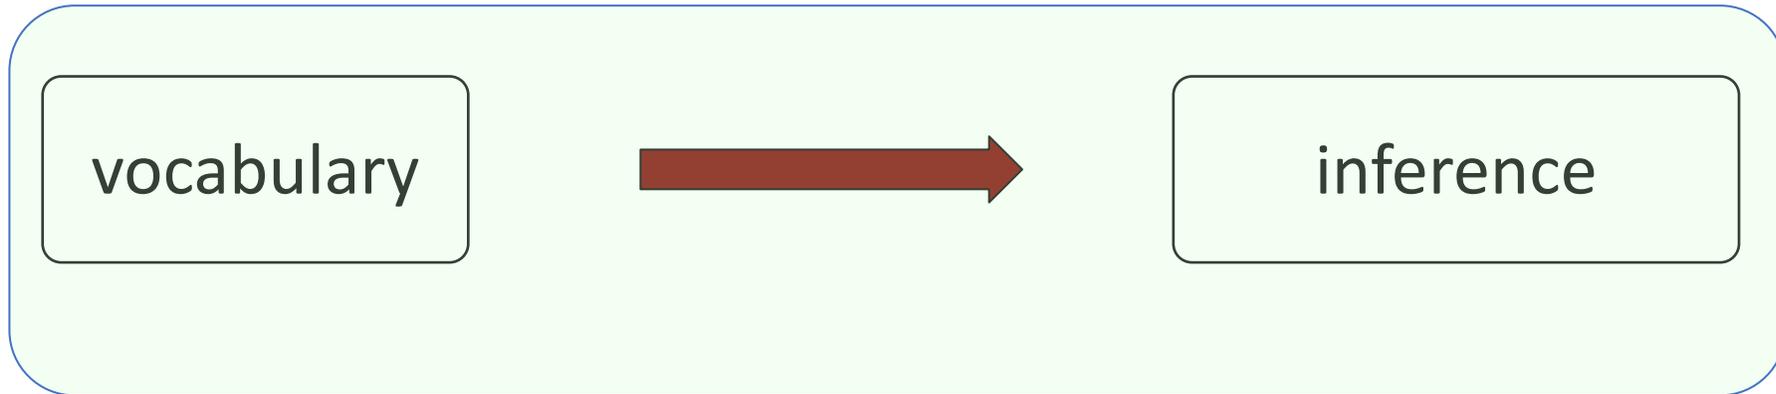

explained sizeable variance
in G3 reading
comprehension: $R^2 > .94$)

Key finding 3: these skills and knowledge bases share
bi-directional relations

Key finding 3: these skills and knowledge bases share bi-directional relations

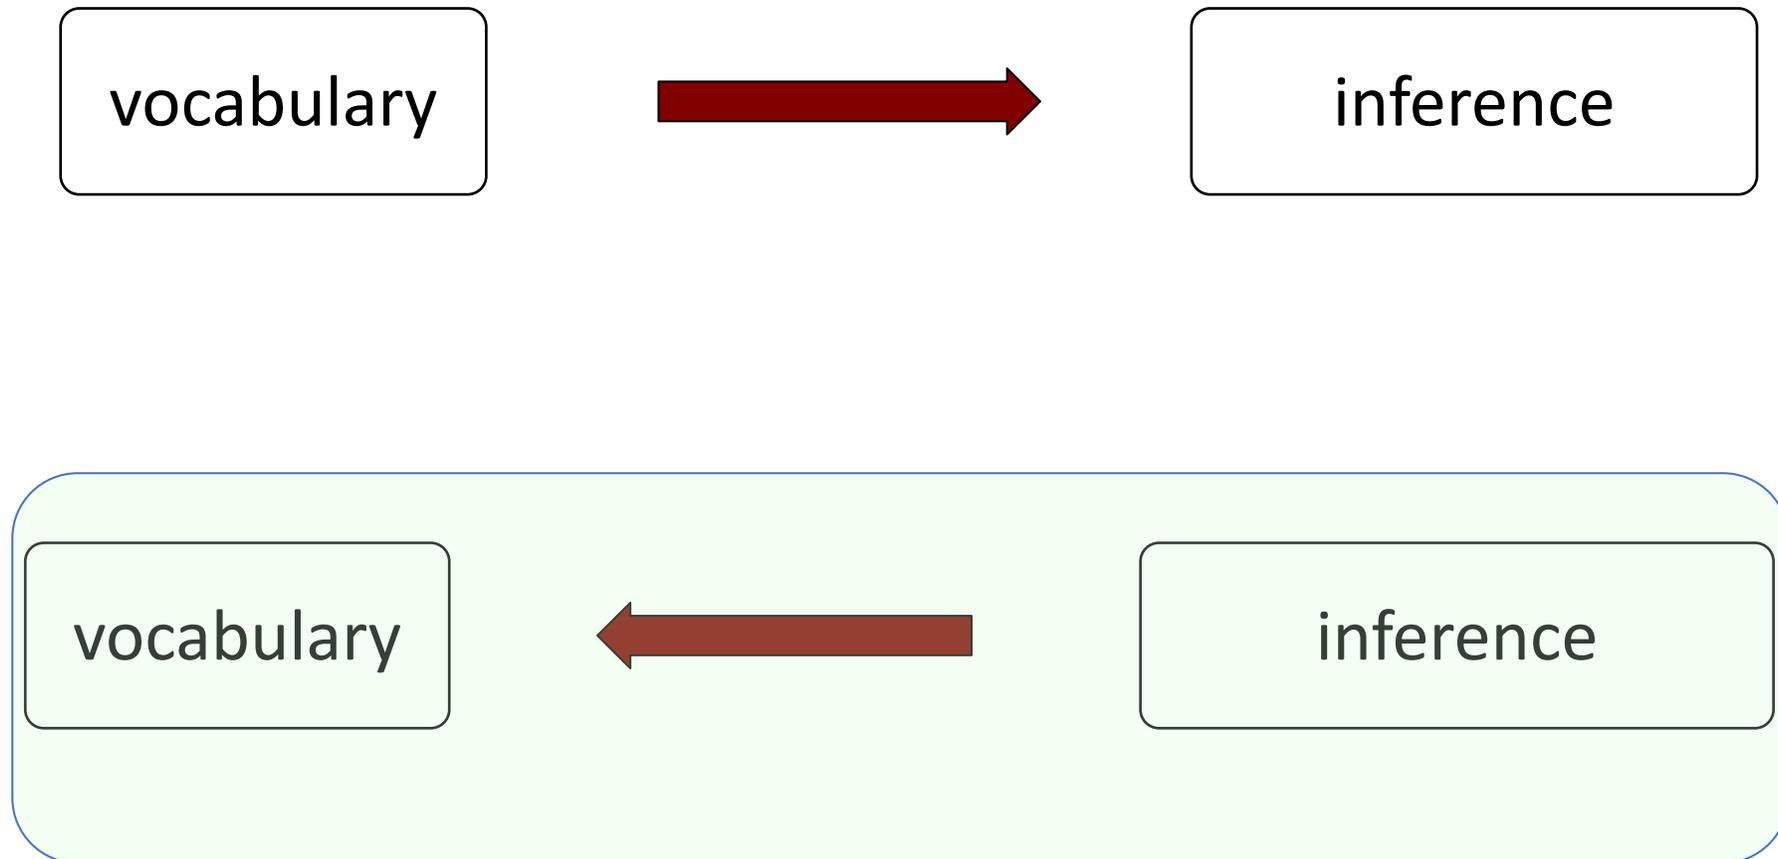

Vocabulary and background knowledge support inference making

Molly was carrying the tumbler of juice. She tripped on the step. Her eyes filled with tears. *“Don’t worry”* said her brother, and he went to fetch the mop.

Key finding 3: these skills and knowledge bases share bi-directional relations

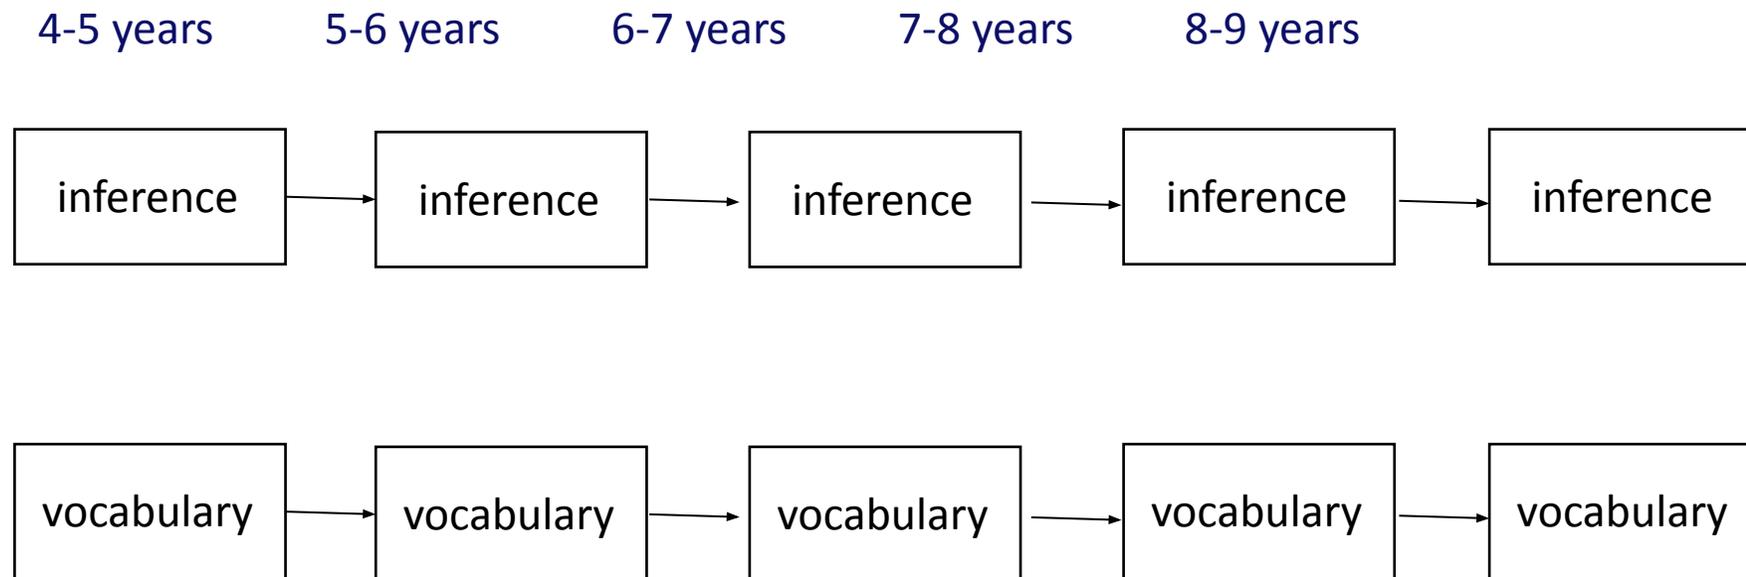

Inference making supports vocabulary learning

Molly was carrying the **tumbler** of juice. She tripped on the step. Her eyes filled with tears. *“Don’t worry”* said her brother, and he went to fetch the mop.

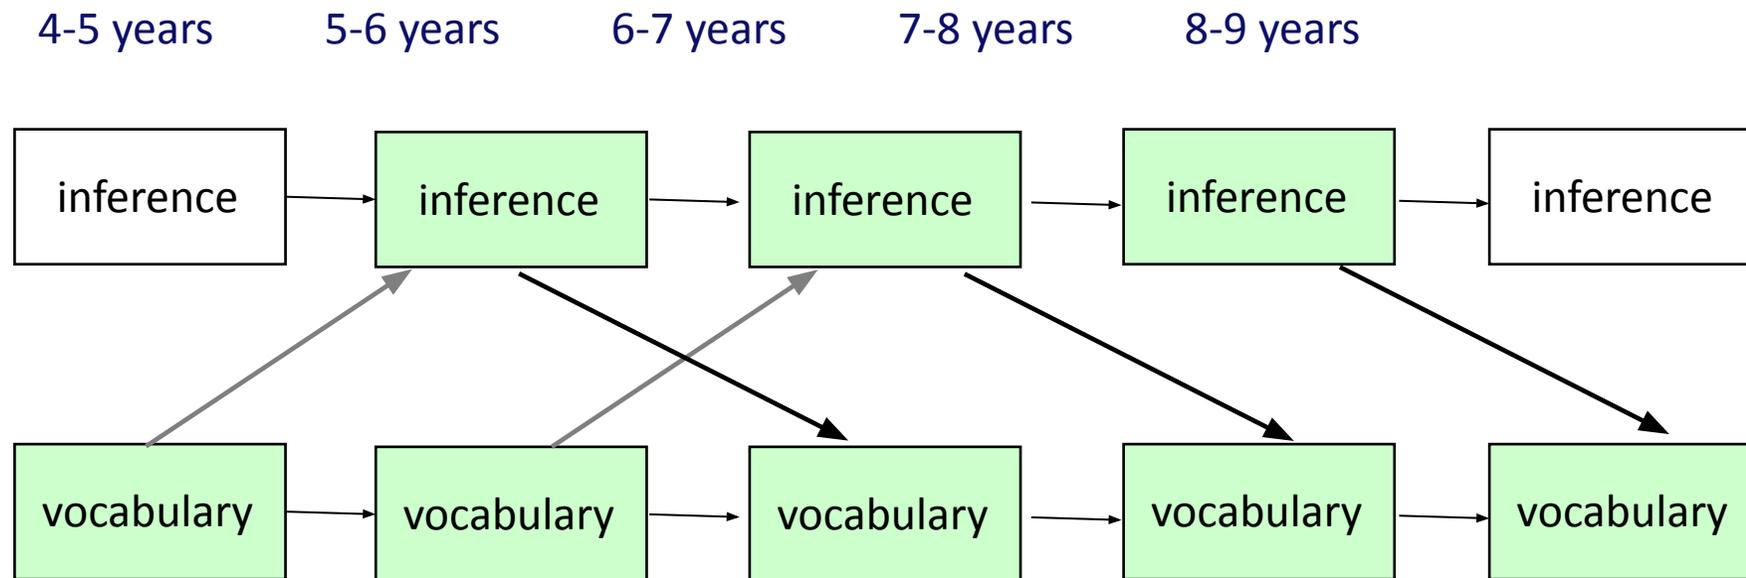

tumbler = container
for liquid

Key finding 3: these skills and knowledge bases share bi-directional relations over time

Key finding 3: these skills and knowledge bases share bi-directional relations over time

What I have learned: the foundation and 3 key findings

Successful reading comprehension involves constructing a mental model that represents the situation(s) described in the text.

Beyond decoding, a range of language skills, knowledge, and processes support reading for meaning.

Each predicts reading comprehension over time.

These skills support each other to construct meaning from a text, and also reciprocally across development.

Overview

A bit about me

- What inspired me?

What I have learned about reading comprehension

- The foundation and 3 key findings from my work

How can these research findings inform practice to make a difference?

- My 3 takeaway messages

What next?

Takeaway 1: don't focus on a single 'skill' – embrace the complexity

Vocabulary

Grammar

Higher-level
language

inference

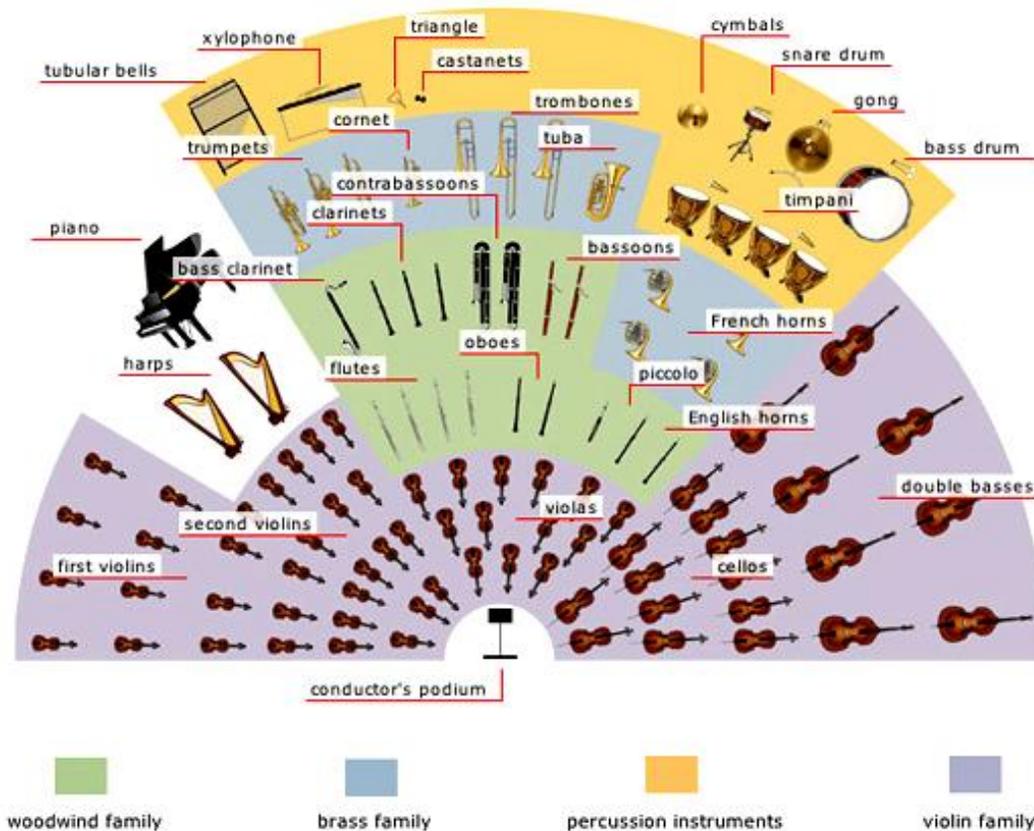

monitoring

text structure

Successful interventions for poor comprehenders and curricula typically provide instruction in a range of skills:

- Vocabulary, narrative, comprehension monitoring (Clarke et al., 2010)
- Comprehension monitoring, integration, text structure (Carretti et al., 2014)
- Vocabulary, grammar, comprehension monitoring, text structure (LARRC et al., 2019).

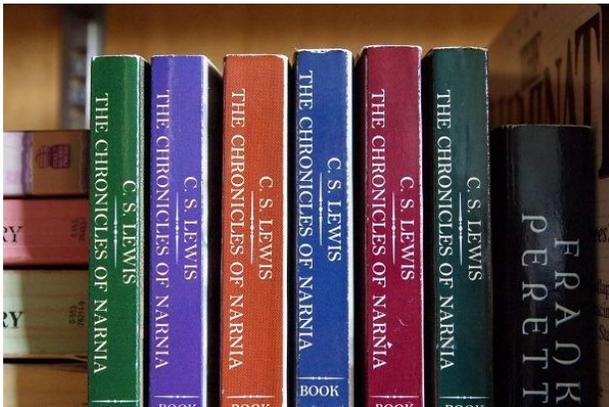

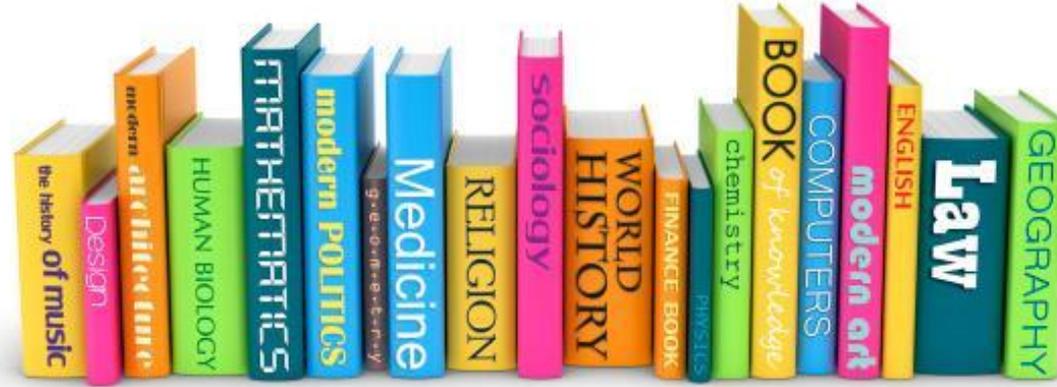

Takeaway 1: don't focus on a single 'skill' – embrace the complexity and support the process of reading for meaning

Takeaway 2: start early - don't wait for secure word recognition

Takeaway 3: think beyond reading instruction - support comprehension for learning

Three key takeaways

Successful reading comprehension draws on a range of language skills, knowledge, and processes; so successful instruction and intervention should include multiple skills and model the construction of meaning.

Comprehension can be fostered through a range of activities; support should start early and can be designed to include poor word readers.

Comprehension needs change through schooling; support should extend beyond the reading classroom to ensure successful learning.

Overview

A bit about me

- What inspired me?

What I have learned about reading comprehension

- The foundation and 3 key findings from my work

How can these research findings inform practice to make a difference?

- My 3 takeaway messages

What next?

New challenges and opportunities

Opportunity

Digital technology enables timely and targeted support for learners and feedback for educators

Challenge - the digital age.

Screen inferiority effect, navigating varied formats, drowning in (mis) information...

Opportunity

Accessibility and adaptivity of digital provides new opportunities to engage young learners

Comprehension Matters!

Comprehension Matters!
